The 1979 Virginia Corn Performance Trials arrived this week. January is a good time to get a copy of this information and read it and review it carefully.

Select the best corn hybrid available to you. This often means placing your order early. The data from Orange and Blackstone is the most meaningful for our situation.

We are testing a new service for Appomattox citizens. An answering service has been installed for a short period of time to determine the feasibility of permanent use.

Experience indicates that many persons call after normal working hours. With this new service, the name, number and message can be left and a return call will be made by an extension agent. Telephone 352-8244.

Nationwide 30,000 farm operators will be mailed a farm energy survey form during January. If your name comes up, please cooperate with your best estimates if records are not available. As with all census material, a response is mandatory.

There are some cattle management tips that I want to pass along for your consideration. They'll make your work easier and surely the cattle will appreciate the effort.

For winter feeding, sort the cattle into reasonable groups:

1. Herd bulls–These boys need a four acre lot (per head) in off-breeding season.

2. Virgin replacement heifers–Winter this group well-good conditions–Keep them growing (not fat). Angus should weigh at least 650, Herefords 700 pounds and the larger breeds 750 pounds at breeding time.

3. First Calf Heifers–The most overlooked and over-stressed grouping in the herd. Remember these heifers are still growing–need to stay warm–suckling a calf and trying to cycle. They need extra feed if they are to do these four things well. The penalty–first they don't cycle–so you have the next calf crop coming late. Next the calf won't make its potential growth. These cattle can be intimidated by older cows–separate them.

4. Mature Cow Herd–Usually no problem unless there are real old cows in herd or lame. Dairy crosses and simmental crosses seem to do better when separated.

5. Weaned Steers and Heifer Calves–Separate certainly by sex and by weight if there is at least 200 pounds difference in weight.

Now for a final rundown on general management jobs:

1. Worm–especially young cattle, but the herd if it wasn't done last fall.

2. Lice Treatment–There are two pour-ons that are recommended–Korlon 2 and Lysoff. Use this month! Malathion or ciordrin can be used as a spray–weather and equipment permitting.

3. Get ready for calving. It's good business to sort heavy cows and heifers at weekly intervals from the herd for close watch.

4. Bulls–Need a better performing bull? The Red House and Culpeper sales are just around the corner.
